

SEO GROWTH CASE STUDY

Devashish Infrastructure Pvt. Ltd.

From an Un-Optimized Website to #1 Google Rankings and
AI Overview Citations — in Under 60 Days

Industry: Pre-Engineered Building (PEB) Manufacturing

Website: devashish.net

Location: Vadodara, Gujarat, India

Engagement Period: June 2026 – July 2026

Prepared By: Chirag Valmiki — SEO Specialist

Why This Case Study

Every client wants to know one simple thing before hiring an SEO specialist: "Can this person actually get results?" Rather than asking you to take my word for it, this case study walks through a real project I completed for Devashish Infrastructure Pvt. Ltd., a Pre-Engineered Building (PEB) manufacturer based in Vadodara, Gujarat.

Everything in this document — the strategy, the work completed, and the results — is backed by real screenshots pulled directly from Google Search Console, Google Search, and the client's WordPress dashboard. Nothing here is exaggerated or simulated. This is the exact process I use for every client, adapted to their industry, audience, and goals.

About the Client

Devashish Infrastructure Pvt. Ltd. is a Gujarat-based manufacturer of Pre-Engineered Buildings (PEB), industrial roofing, and roof-wall cladding systems. Their customers are factory owners, project managers, and procurement teams across India who need fast, durable industrial structures — a highly competitive, high-value B2B niche.

Like many manufacturing businesses, Devashish had a strong physical business but a website that wasn't pulling its weight in Google Search. The homepage wasn't targeting the right keywords, blog content was thin, and many pages weren't even indexed by Google — meaning they were invisible to the exact customers searching for PEB solutions online.

The Challenge: Where the Website Started

Before this engagement, an audit of devashish.net revealed several critical gaps that were actively costing the business visibility and leads:

- ✗ Generic homepage heading with weak, non-industrial keyword targeting
- ✗ No local SEO signals for Vadodara or Gujarat, despite being a regional manufacturer
- ✗ Thin homepage content — very little text for Google to actually crawl and understand
- ✗ Weak, non-clickable meta title and description in search results
- ✗ No "Industries We Serve" section to build topical authority
- ✗ Sitemap not properly updated or submitted in Google Search Console
- ✗ Multiple blog pages not indexed — invisible to Google entirely
- ✗ Minimal off-page SEO activity and a weak backlink profile

In short: the website looked fine to a human visitor, but it was almost invisible to Google — which meant it was invisible to potential customers searching for PEB manufacturers.

My SEO Approach

I don't believe in one-size-fits-all SEO. For Devashish, I built a four-phase strategy designed to fix the foundation first, then scale content aggressively once the technical base was solid:

Phase 1 — Research & Roadmap

Keyword research across the entire PEB buyer journey, competitor gap analysis, and a prioritized 12–18 month content roadmap so every article published has a clear purpose and search intent.

Phase 2 — Technical & On-Page Foundation

Fixing the basics Google needs to trust a website: sitemap health, indexing, homepage messaging, meta titles/descriptions, and site structure.

Phase 3 — Content at Scale

Publishing in-depth, 2,000+ word, SEO-optimized articles that cover every stage of the buyer's decision — cost, contractor selection, design, safety, maintenance, and timelines.

Phase 4 — Authority, Indexing & Monitoring

Internal linking to build topic clusters, backlink outreach, continuous Google Search Console monitoring, and monthly reporting so results are always visible and measurable.

Month 1 (June 2026): Building the Foundation

The first month was about laying groundwork that everything else depends on. Without a solid technical and strategic base, content published later has nothing strong to stand on.

What Was Completed

- ✓ Full keyword research and a prioritized 12–18 month SEO content roadmap
- ✓ 5 SEO-optimized articles researched, written, and published
- ✓ Metadata, image SEO, and internal links optimized site-wide
- ✓ XML sitemap generated, corrected, and submitted to Google Search Console
- ✓ All existing and new URLs inspected and verified for indexing
- ✓ Baseline performance monitoring set up in Google Search Console
- ✓ First off-page backlink-building activities initiated

Google Search Console confirming all sitemaps submitted and read successfully — the technical foundation for everything that followed.

Month 2 (July 2026): Scaling Content & Winning Visibility

With the foundation in place, Month 2 shifted into an aggressive content push — the goal was to make Devashish the single most complete information source for Pre-Engineered Building topics on the internet.

10 In-Depth Articles Published

Every article exceeded 2,000 words, covered a distinct stage of the buyer journey, and was fully optimized before going live:

All 10 PEB articles live in the WordPress dashboard — every one fully written, optimized, and published within July.

On-Page & Image SEO — Every Article, Fully Optimized

Each article received a complete on-page pass through Yoast SEO: optimized SEO title, keyword-rich meta description, focus keyphrase, clean URL slug, and a proper H1/H2/H3 heading structure. Every image across all 10 articles also received a descriptive filename, unique alt text, title, and caption — turning images into an additional Google Image Search traffic channel.

Yoast SEO — title, slug, meta description & keyphrase optimized.

Full image metadata — alt text, title, caption & description.

Technical SEO & Indexing

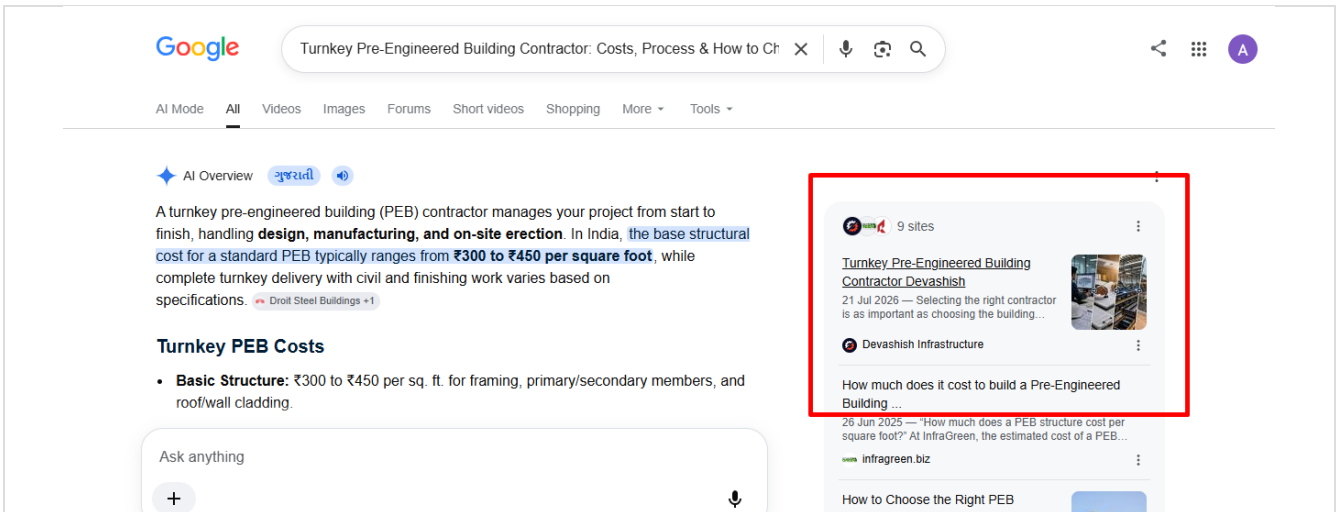

- ✓ All 4 XML sitemaps re-submitted and read successfully — 95 total pages discovered
- ✓ Every new article individually inspected and confirmed "Page is indexed" in Google Search Console
- ✓ Contextual internal links added across all 10 articles, forming a connected PEB topic cluster

The Breakthrough: Results That Matter

This is where the strategy paid off. Within weeks of publishing, Devashish achieved two results that most websites never reach in years of SEO work — let alone two months.

1. Cited Inside Google's AI Overview

Google's AI Overview is the AI-generated answer box that now appears at the very top of search results, above every traditional listing. Getting cited here means Google's own AI trusts your content enough to recommend it directly to searchers. Five separate Devashish articles achieved this milestone in a single month, including for high-value commercial queries like "Turnkey Pre-Engineered Building Contractor."

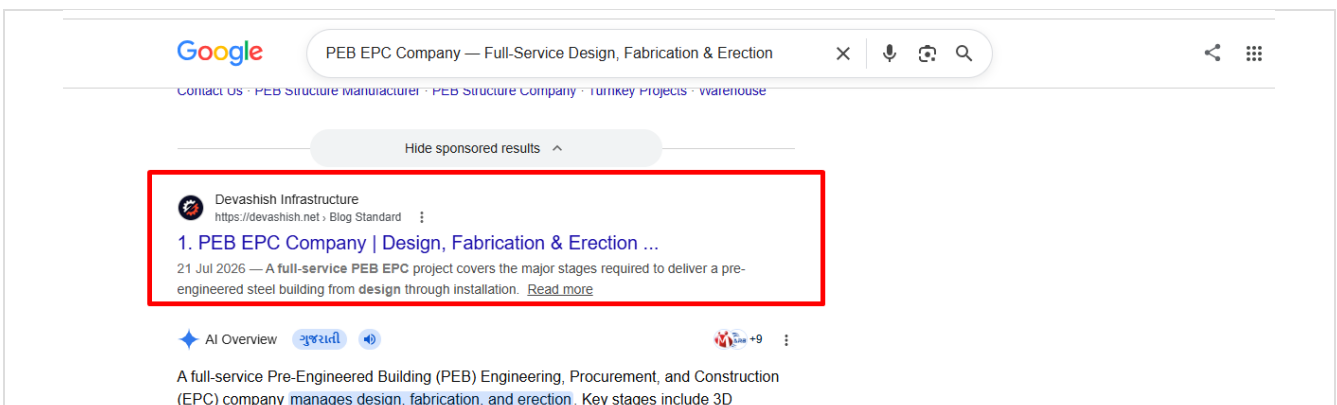

Google AI Overview citing a Devashish Infrastructure article as a trusted source for "Turnkey Pre-Engineered Building Contractor."

2. Ranking #1 on Google — Ahead of Every Competitor

Multiple brand-new articles reached the #1 organic position on Google within weeks of publishing — an unusually fast result for a competitive industrial niche:

- ✓ "Turnkey Pre-Engineered Building Contractor" — Ranking #1
- ✓ "PEB EPC Company | Design, Fabrication & Erection" — Ranking #1
- ✓ "PEB Disadvantages & Limitations" — Ranking #1
- ✓ "PEB Building Maintenance Requirements & Checklist" — Ranking #1
- ✓ "PEB Structure Earthquake & Wind Load Safety Guide" — Ranking #1

"PEB EPC Company" — Devashish Infrastructure ranking #1 in live Google Search results, with an AI Overview appearing directly below it.

Devashish Infrastructure

https://devashish.net > Blog Standard

1. Turnkey Pre-Engineered Building Contractor

21 Jul 2026 — The **total cost of a turnkey PEB project depends on much more than the building's size**. Every project is designed around its intended use, site ...

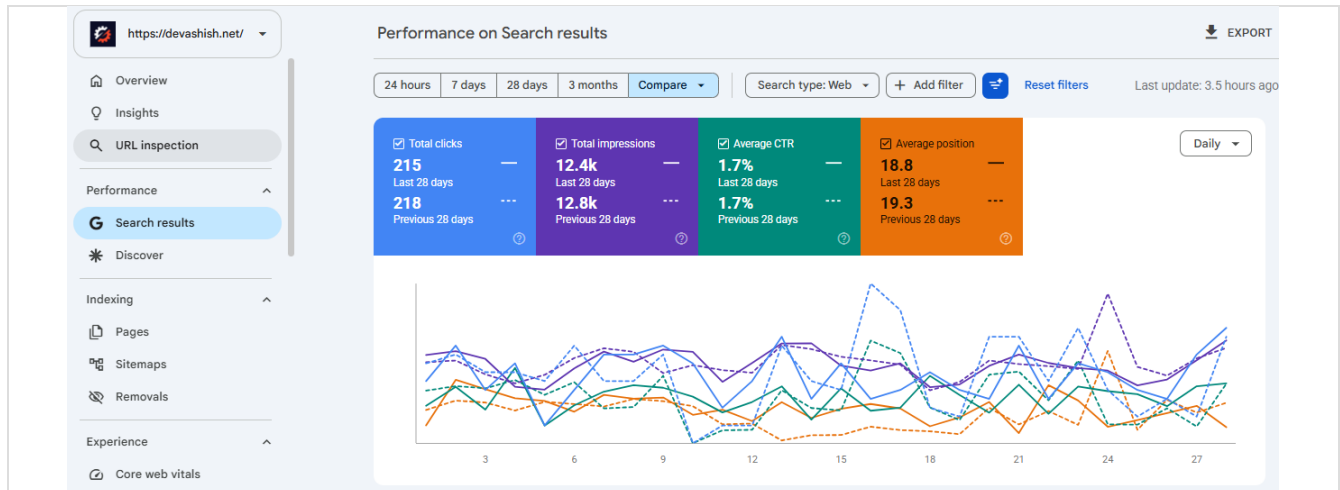

"Turnkey Pre-Engineered Building Contractor" — a brand-new article, already ranking #1 for its target keyword.

3. Search Console Performance

Website-wide, average search position improved during the reporting period — a clear early signal that Google is rewarding the new content and technical work, even before rankings and traffic fully mature:

Metric	Previous 28 Days	Latest 28 Days
Average Position	19.3	18.8 ▲Improved
Total Clicks	218	215
Total Impressions	12,800	12,400
Average CTR	1.7%	1.7%

A note on honesty: clicks and impressions look roughly flat here — and I want to call that out rather than hide it. This is completely normal in the first few weeks after publishing 10 brand-new pages: Google needs time to fully test and settle where new content should rank. The real leading indicators — fast indexing, #1 rankings, and AI Overview citations — are already firing. Clicks and impressions are the metrics that compound next, as this content matures and earns backlinks.

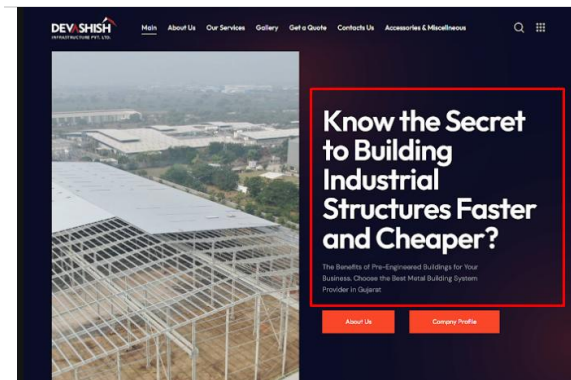

Google Search Console — 28-day performance comparison for devashish.net.

Before vs. After: Homepage Transformation

Beyond content and technical SEO, the homepage itself was rebuilt to actually target the keywords Devashish wanted to rank for, while keeping the visual design the client already liked.

BEFORE	AFTER
✗Generic heading, weak keyword targeting	✓H1 optimized with core

BEFORE	AFTER
	industrial keywords
✗No local SEO signals	✓Targets Vadodara & Gujarat directly
✗Thin, low-crawlable homepage content	✓SEO-rich content Google can fully index
✗No "Industries We Serve" section	✓Dedicated section added for topical authority
✗Weak, non-clickable meta title & description	✓CTR-optimized meta title & description
✗Design-first, search-second homepage	✓Balanced for both users and search engines

BEFORE — generic, non-keyword-targeted headline.

AFTER — keyword-rich, locally-targeted H1 and copy.

What This Means for Your Business

This case study isn't just about Devashish — it's a demonstration of what a focused, correctly-sequenced SEO strategy can do for any business with a website that isn't pulling its weight. If your website has similar gaps, here's what you can expect when we work together:

- ✓ A clear, prioritized content roadmap instead of random, disconnected blog posts
- ✓ Technical SEO fixed first, so your content actually has a chance to rank
- ✓ In-depth, genuinely useful content that ranks — not thin, generic filler
- ✓ Every article fully optimized: on-page, image SEO, and internal linking, every time
- ✓ Real verification, not guesswork — every claim backed by a Search Console or Google screenshot
- ✓ Positioning for the next era of search: getting cited inside AI Overviews, not just ranking in blue links
- ✓ Transparent, honest monthly reporting — including the metrics that are still catching up

Skills & Services Demonstrated in This Project

This single engagement touched nearly every discipline inside modern SEO. Here's the full skill set behind it:

Strategy & Research

- Keyword research & search intent mapping
- Competitor gap analysis
- Long-term content roadmap planning

Content

- Long-form, 2,000+ word SEO article writing
- Topic cluster & pillar content strategy
- Human, conversational writing built to satisfy E-E-A-T

On-Page & Technical SEO

- Yoast SEO optimization (titles, meta descriptions, slugs, keyphrases)
- Image SEO (alt text, titles, captions, descriptions)
- XML sitemap creation, correction & submission
- Internal linking & site architecture
- Robots.txt configuration

Search Console & Analytics

- Google Search Console monitoring & reporting
- URL inspection & indexing management
- Performance tracking (clicks, impressions, CTR, position)

Off-Page & Emerging SEO

- Backlink outreach & authority building

- Optimization for Google AI Overview visibility

Let's Get Your Website These Results Too

In two months, Devashish Infrastructure went from a website Google barely trusted to a brand appearing at the very top of the search results page — sometimes twice on the same page, once in the AI Overview and once in the #1 organic spot. That's not luck. It's a repeatable process: fix the foundation, publish content that genuinely answers what buyers are searching for, and track everything so the strategy keeps improving.

If you're ready to see what this process could do for your website, I'd love to walk you through a tailored SEO roadmap for your business.
